Protective Actions: Developing Context-Based Guidance on What to do During an Earthquake

Panel Discussion
Revised Guidance Document Now Available!

Please visit our website www.geohaz.org or send me an email at rodgers@geohaz.org
Key Findings

- No single protective action is appropriate in all locations
- Protective actions cannot be considered as a substitute for safe buildings
- Plan ahead: understand your environment and what to do in the places you spend the most time each day
- Situational awareness: find the safest place you can reach in a few seconds
- Slogans aren’t enough, people need to know why
